

## Clone Product

Product configuration is an important step, since you need to specify all the rating entries properly in order to ensure the correct functionality. To minimize the amount of work required to create new products, PortaBilling® allows you to create them as clones of existing ones. In this case, PortaBilling® will copy all the tariffs used in an old product and generate a replica of it. The new product will have exactly the same rating entries except that they will now refer to the newly created tariffs.

Administrators can clone all existing products within the environment, while resellers are limited to cloning only those products they have access to. Any modifications in the newly created product will not affect tariff or rate data configuration within the old product. However, it is important not to make changes in the old product while a new one is currently being cloned.

To clone a specific product, click the  **Clone** button in the toolbar on the Edit Product page. Give the new product a name, then click the  **Save** button.

The screenshot shows the 'Edit Product' interface for 'SIP Subscribers'. The main form includes fields for Product Name, Currency, Product Name visible to End User, Managed By, and Product Type. A 'Clone Product' dialog box is overlaid on the form, containing the following fields and options:

- Product Name: \* SIP Subscribers (cloned)
- Managed By: Administrator Only
- Default Discount Plan: EasyCall Ltd - Standard
- Clone All Tariffs
- Clone All Subscriptions
- Buttons: Help, Clone, Cancel

**NOTE:** Cloning may take a significant amount of time, depending on the amount of data involved. The new product will appear in the product list only after the cloning is complete.
